FIRST THINGS FIRST: THANK YOU!

We are grateful for your time, support, and willingness to beta test Kapha's oral spray technology.

Inspired by the glycoprotein mucin, which is the body's natural protective coating, Kapha Bio's technology is designed to support the mouth's healthy microbiome while relieving the symptoms of dry mouth. This innovative approach has the potential to provide relief for the many people affected by oral health conditions, and your participation in this beta testing is an important step in helping us advance our product towards the market.

COMPANY CONTACTS

If you have any questions, contact **Maddie Krieger** - Beta Testing Program Coordinator
mkrieger@kaphabio.com
541-510-3128 (*feel free to text with any urgent questions/concerns)*

If you need to withdraw from the study for any reason, please contact Maddie **BEFORE or immediately after stopping product use.** We want to capture your experience with an early-exit survey.

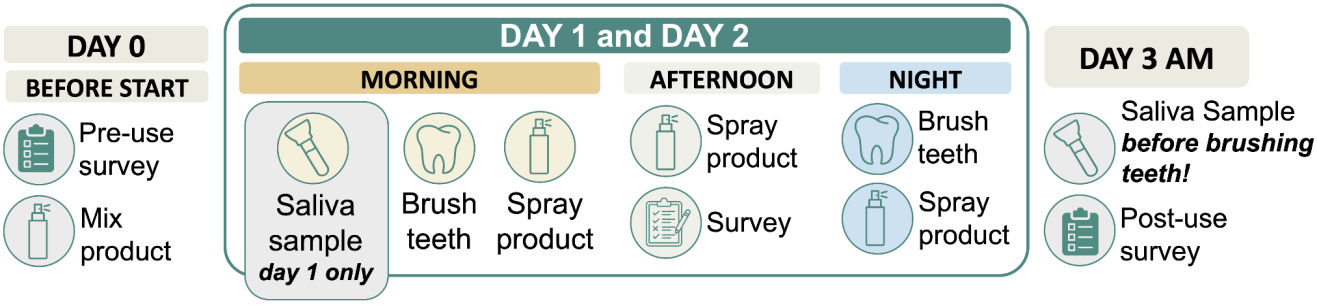

WHAT YOU'LL BE DOING

What's involved:

- Prepare the spray using the provided mixing instructions
- Use the product 3x daily for 2 days
- Fill out surveys about your symptoms
- Take a saliva microbiome sample at the start and end of the testing period
- Ship your microbiome samples back to us

What you get:

- 🧴 Free product
- 🧫 Your own personalized microbiome report
- 🥰 Possible relief from your symptoms

KIT CONTENTS

- Powdered product (labeled “mucin”) in a conical tube
- Water in a conical tube
- 1 spray bottle (empty)
- 2x saliva collection tubes
- Small plastic funnel

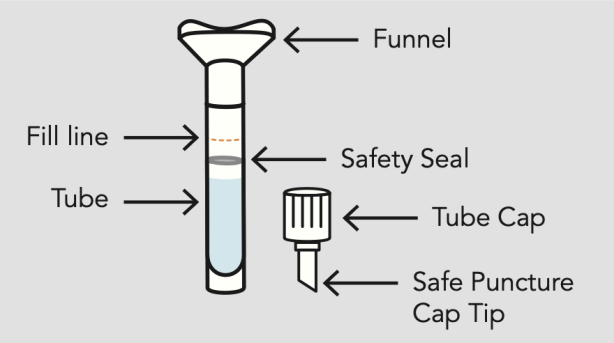

Key things to Note BEFORE YOU BEGIN

- You will be applying the product three times a day for 2 days. A schedule and instructions are included in this document.
- You’ll be taking a saliva sample for microbiome analysis before and after the 2-day testing period. We provide detailed instructions on how to do this below.
- You will be filling out perception surveys during the duration of product use.
- Please refrain from using other dry mouth treatments for the duration of this beta test.
- This is an investigational/beta product, not an FDA-approved treatment

INSTRUCTIONS

How to: Collect a saliva sample for microbiome analysis (Morning of Day 1 and Day 3)

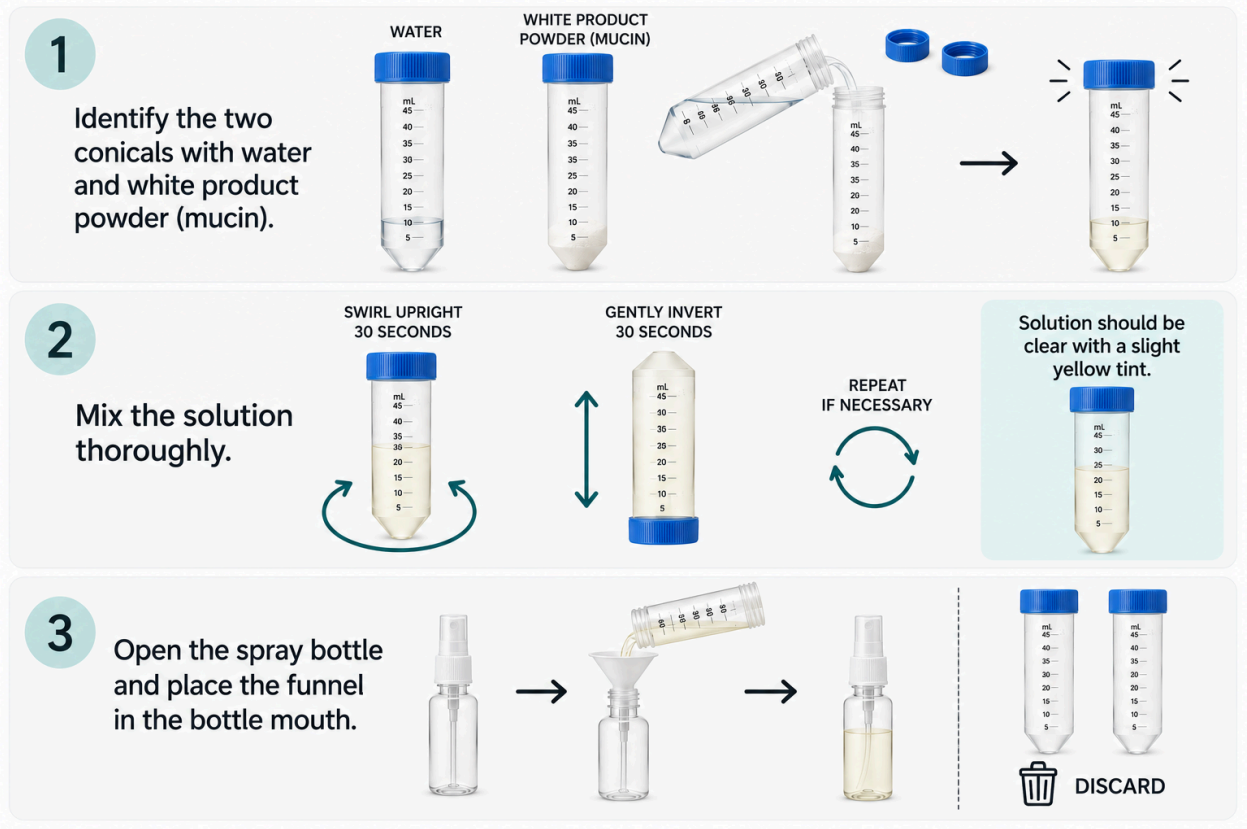

1. Collect your saliva sample in the morning on days 0 and 3 **BEFORE brushing your teeth, drinking any liquids or eating any food**.
2. Open the sterile tube package, and twist the funnel onto the top of the tube..
3. Hold the tube vertically and place the funnel opening under your mouth.
4. Spit saliva into the funnel and repeat until the saliva liquid (not foam) reaches the fill line.

5. Remove the funnel by holding the tube vertically and twisting off. Discard the funnel.
6. Close the tube with the cap by holding the tube vertically and pressing and turning the cap. Secure tightly, and then invert the tube for 10 seconds.
7. Shake the closed tube vigorously a few times.
8. Label the tube with the **date**, your **last name,** and the timepoint (either "**Start**" or "**End**").
9. Store the tube somewhere safe (room temperature) until you mail it back to the Kapha Bio team at the end of the study.
10. When the study is done, we will send you instructions to ship the swabs back using a pre-paid mailing label.

How to: Make the product solution (do this ONCE, Day 0)

1. Identify the two conicals with water and white product powder. Unscrew the lids, and carefully pour the water into the conical with the white powder. Recap the tube firmly.
2. Mix the solution thoroughly: first, mix the conical in an upright position using a gentle swirling motion (30 seconds), and then gently invert the tube to further mix (30 seconds). Mix gently to minimize foaming, and repeat the swirling process if necessary. When fully mixed, the product solution should be clear with a slight yellow tint.
3. Open the spray bottle and place the funnel in the bottle mouth. Pour all of the mixed product solution into the funnel. Once the spray bottle is full, recap the spray bottle. Discard the other two empty conicals and funnel.
4. Store in the fridge between uses.

How to: Apply the product (3x a day for 2 days)

1. If you will be brushing your teeth around the time of application (e.g. morning and evening), brush your teeth first **before** using the spray in your mouth.
2. Give the spray bottle a gentle swirl to resuspend the product.
3. Spray the product so that it completely covers the surface of your mouth and teeth using **10 individual sprays**. We recommend dividing your mouth up into sections, so that you use one spray on the left, right, and front teeth/gums and then the left and right sides of your mouth on both the top and the bottom.
4. After administering the 10 sprays, and spreading the mucin evenly throughout your mouth, spit out any extra mucin into the sink (i.e. don't swallow extra mucin).
5. Try to avoid drinking liquids or eating food for 30 minutes after applying the spray.

DETAILED SCHEDULE WITH LINKS

Access the correct combined survey via the calendar below.

If you accidentally miss a day, please let the program coordinator (Maddie) know and keep applying the product as scheduled.

Day	Survey Activity		Sample Collection	Other	Application
Day 0	Pre-use survey			Mix up product	
Day 1		Product perception survey	Saliva collection AM *before* product use		Apply product AM, afternoon and PM
Day 2		Product perception survey			Apply product AM, afternoon and PM
Day 3 AM	Post-use survey		Saliva collection AM
