FIRST THINGS FIRST: THANK YOU!

We are grateful for your time, support, and willingness to beta test Kapha's vaginal suppository technology.

Inspired by the glycoprotein mucin, which is the body's natural protective coating, Kapha Bio's technology is designed to support the vagina's healthy microbiome while helping to relieve unwanted vaginal symptoms. We hope this innovative approach will one day provide relief for the many women, and your participation in this beta testing is an important step in helping us advance our product towards the market.

COMPANY CONTACTS

If you have any questions, contact **Maddie Krieger** - Beta Testing Program Coordinator
mkrieger@kaphabio.com
541-510-3128 (*feel free to text with any urgent questions/concerns)*

If you need to withdraw from the study for any reason, please contact Maddie BEFORE or immediately after stopping product use. We want to capture your experience with an early-exit survey.

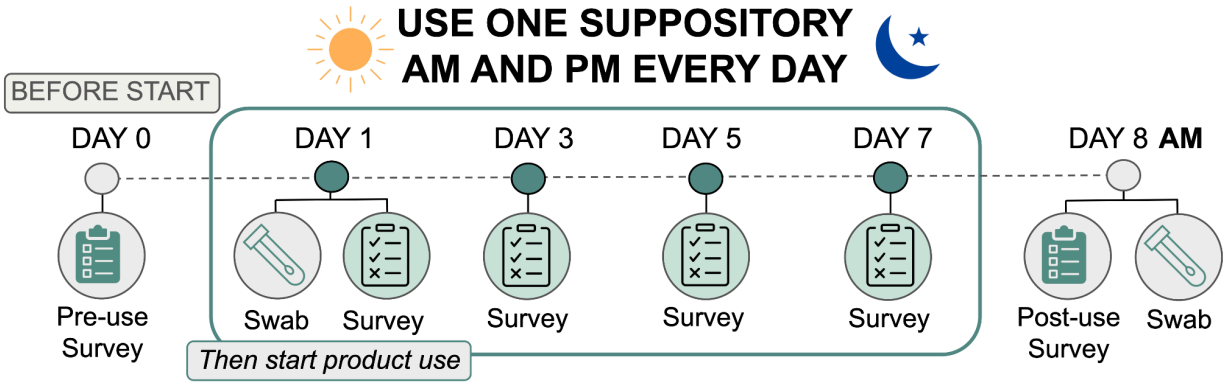

WHAT YOU'LL BE DOING

What's involved:

- Use the product 2x daily for 7 days
- Fill out surveys about your symptoms
- Take a vaginal microbiome sample at the start and end of the testing period
- Ship your microbiome samples back to Kapha (shipping label will be provided)

What you get:

- 🧴 Free product
- 🧫 Your own personalized microbiome report
- 🥰 Possible relief from your symptom

KIT CONTENTS

- 16x vaginal suppositories (you only need 14, but there are 2 extra)
- 3x microbiome swabs (you only need 2 for the study, but we included an extra)

Key things to Note BEFORE YOU BEGIN

- You will be using the suppository 2x a day for 7 days. A schedule and instructions are included in this document.
- You'll be taking a vaginal swab for microbiome analysis. We provide detailed instructions on how to do this below.
- You will be filling out perception surveys during the duration of product use.
- This suppository is intended to be used when you are *not* on your period. Please plan your testing accordingly, so that you are not menstruating for the full 7 days of testing.
- Please refrain from using any vaginal products for the duration of this beta test.
- This is an investigational/beta product, not an FDA-approved treatment.

INSTRUCTIONS

How to: Collect a vaginal swab sample for microbiome analysis (Morning of Day 1 and Day 8)

Conduct your first vaginal swab on Day 0 before starting product use.

1. Open the sterile swab package without touching the swab's spongy tip and remove the swab from the packaging, holding only the end of the handle.
2. Hold the swab handle and insert the swab into your vagina.
3. Move the swab around in a circular motion for 30 seconds before removing the swab from your vagina.
4. While still holding the swab, open the tube with your free hand and insert the swab sponge into the collection tube without touching the tip to anything else.
5. Bend the swab handle at the designated score line until it snaps off.
6. Securely screw the cap onto the tube.
7. Label the tube with the **date**, your **last name,** and the timepoint (either "**Start**" or "**End**").
8. Store the tube somewhere safe (room temperature) until you mail it back to the Kapha Bio team at the end of the study.
9. When the study is done, we will send you instructions to ship the swabs back using a pre-paid mailing label.

How to: Insert the suppository (2x a day for 7 days, once in the morning and once in the evening)

A vaginal suppository is a solid capsule inserted into the vagina and designed to dissolve inside the vaginal canal.

When you're ready to start, wash your hands before insertion.

You can insert a vaginal suppository while:

- Lying on your back with your knees bent
- Standing with one foot elevated on a toilet seat or chair
- Squatting

Choose the position that gives you the most control and comfort.

To insert the suppository:

1. Hold the suppository between your thumb and index finger.
2. Gently insert it into the vaginal opening.
3. Push it in about 1 to 2 inches (2.5 to 5 cm), or until it feels secure and comfortable.
4. Wash your hands again with soap and warm water.

DETAILED SCHEDULE WITH LINKS

Access the correct combined survey via the calendar below.

If you accidentally miss a day, please let the program coordinator (Maddie) know and keep applying the product as scheduled.

Day	Survey Activity		Sample Collection	Product Use
Day 0	Pre-use survey
