KAPHA BIO BETA TEST · SKINCARE

PARTICIPANT PROTOCOL

14 days of product use · 16 days total

FIRST THINGS FIRST: THANK YOU!

Thank you for helping test Kapha Bio's new products. Our technology is inspired by **mucin**, the body's natural protective coating. It's designed to support your skin's natural microbiome while helping soothe dryness and irritation.

Your participation is an important step in bringing these products to the many people who need them. We're incredibly grateful for your time and support.

AT A GLANCE

WHAT YOU'LL DO

- **Apply the product 2× a day** (morning and evening) for 14 days
- **Fill out short surveys** and take photos of your skin
- **Swab your skin** at the start (Day 1) and end (Day 15)
- **Mail your swabs back** (prepaid label provided)

WHAT YOU GET

- 🧴 Free product
- 🧫 Your own personalized microbiome report
- 🥰 Possible relief from your symptoms

QUESTIONS? CONTACT MADDIE

Maddie Krieger · Beta Testing Program Coordinator
mkrieger@kaphabio.com · **541-510-3128** (texting is fine for anything urgent)

Need to stop early? Please contact Maddie **before** or right after you stop using the product. We'll send a short early-exit survey. Your feedback still counts!

WHAT'S IN YOUR KIT

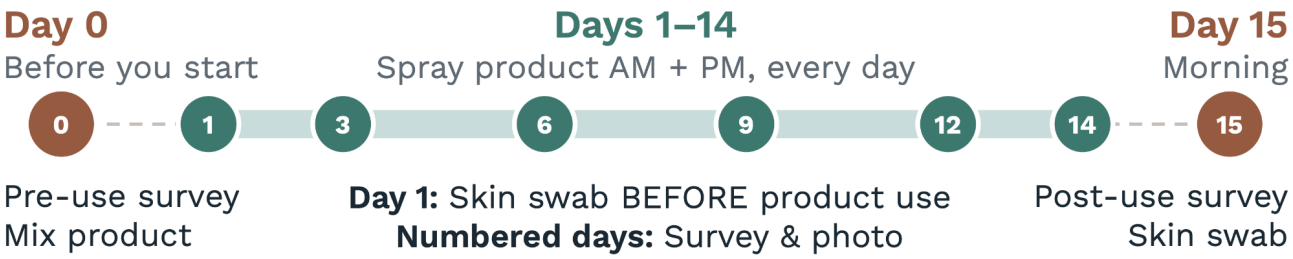

- **Product powder** (labeled "mucin") in a tube
- **Water** in a tube
- **Spray bottle** (empty) and a **small funnel**
- **3 skin swabs** (you need 2; one is a spare)
- **12 small red sticker dots** and a **marker**

BEFORE YOU BEGIN

- **Keep your routine the same.** Don't start or stop any other treatments during the test. List anything you use in your surveys.
- **Shaving?** Keep the same schedule (e.g., every day or every other day), and don't shave right before taking photos.
- **One spot only.** Apply the product to, photograph, and answer surveys about the same single area.
- **Keep the product in the fridge** between uses.

YOUR SCHEDULE

Use the links below to open each survey. **Every survey includes a photo upload.**

DAY	PRODUCT	SWAB (AM)	SURVEY + PHOTO
Day 0 before	**Mix the product**		Pre-use survey
Day 1	AM + PM	✓ **Swab**	Perception survey
Day 2	AM + PM		—
Day 3	AM + PM		Perception survey
Day 4	AM + PM		—
Day 5	AM + PM		—
Day 6	AM + PM		Perception survey
Day 7	AM + PM		—
Day 8	AM + PM		—
Day 9	AM + PM		Perception survey
Day 10	AM + PM		—
Day 11	AM + PM		—
Day 12	AM + PM		Perception survey
Day 13	AM + PM		—
Day 14	AM + PM		Perception survey
Day 15 AM	**Done!**	✓ **Swab**	Post-use survey

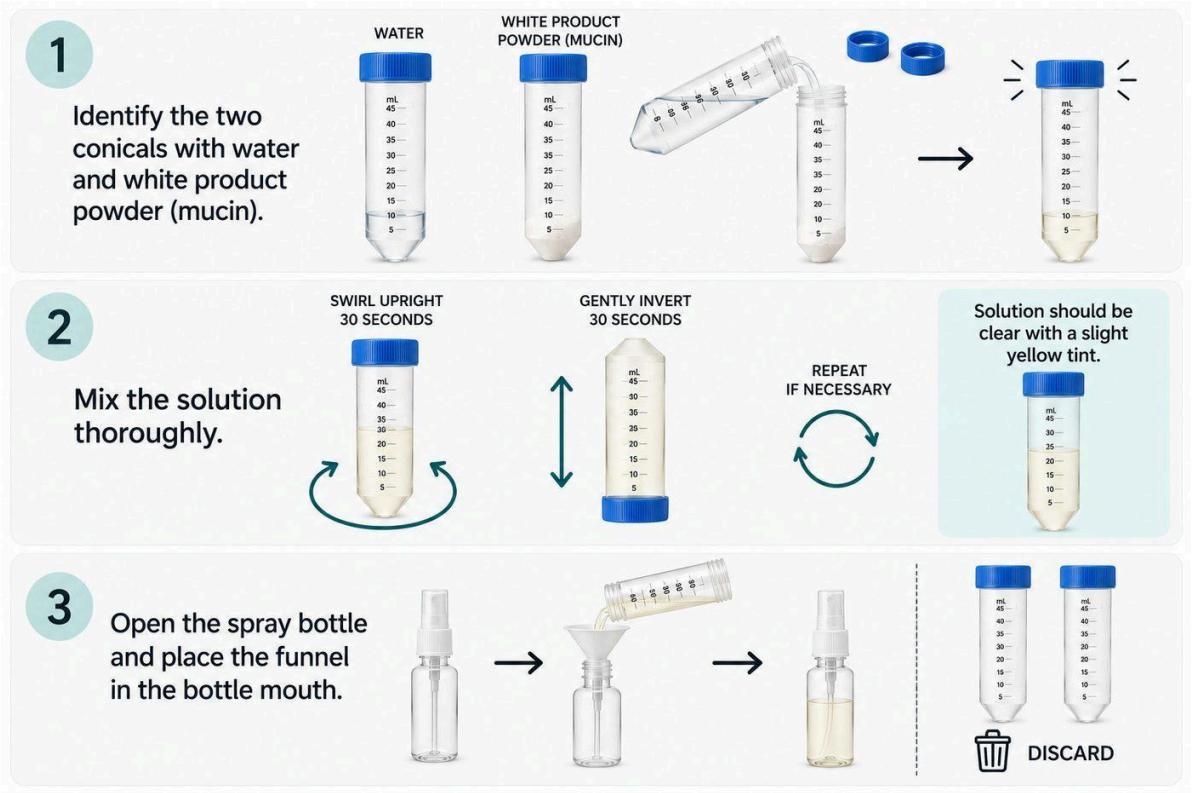

STEP-BY-STEP INSTRUCTIONS

Choose your treatment area DAY 0

1. Pick **one** affected area. Ideally it's **1–2 inches across** and surrounded by healthy skin.
2. No spot fits exactly? That's OK. Pick the closest match. If you only have one affected area, use that.
3. Use this same area for all photos, product use, and survey answers.

Mix the product DAY 0 · ONCE

1. Pour the **water** into the tube with the **white powder**. Cap it tightly.
2. **Swirl** upright for 30 seconds, then gently **turn upside down** for 30 seconds. Repeat if needed. Go gently to avoid foam.
3. Check it: the solution should be **clear with a slight yellow tint**.
4. Put the **funnel** in the spray bottle and pour in all the solution. Cap the bottle and discard both empty tubes.
5. **Store in the fridge.**

Take your photos **DAYS 0, 1, 3, 6, 9, 12, 14 & 15**

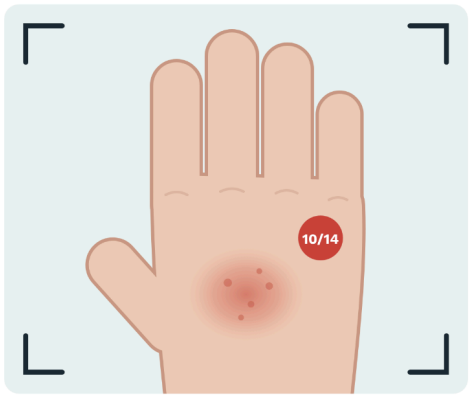

You'll upload a photo with every survey. Consistent photos let us compare your skin accurately.

1. Write today's date (month/day) on a **red sticker dot**.
2. Place the dot on **healthy skin right next to** the affected area. Use the same spot every time.
3. Keep the **background, lighting, focus, and angle** the same for every photo. Use the setup from your Day 0 photo that best shows your symptoms. Steady indoor lighting, like a bathroom, works well.
4. Include a nearby body part (like an earlobe or finger) to show where the photo was taken.
5. Ask a friend or family member to help if needed.

KAPHA BIO BETA TEST

PHOTO GUIDELINES

Take one photo of your treatment area with **every survey**: Days 0, 1, 3, 6, 9, 12, 14 & 15.

Dated red dot on healthy skin
Affected area centered, in focus
A landmark finger, earlobe, etc.

1 **Date your dot**
Write today's date (month/day) on a red sticker dot before each photo.

2 **Place it next to the area**
Stick the dot on healthy skin right beside the affected area, in the same spot every time.

3 **Keep your setup the same**
Same lighting, background, distance, and angle. Steady indoor light, like a bathroom, works well.

4 **Skip the extras**
No products or fresh shaving on the area before photos. A helper can hold the camera.

Swab your skin **DAYS 1 & 15 · MORNING**

> **Swab first thing in the morning, on unwashed skin,** before the product or any other skincare.

1. Open the package. Hold the swab **by the end of the handle only**. Don't touch the spongy tip.
2. Rub the tip firmly back and forth over your treatment area **20–30 times**, rotating to use all sides.
3. Open the tube with your free hand and put the swab tip inside without touching anything else.
4. **Snap the handle** at the score line and screw the cap on tightly.
5. **Label the tube** with the date, your last name, and **"Start"** (Day 1) or **"End"** (Day 15).
6. Store at **room temperature** until the test is over. We'll send a prepaid label and shipping instructions.

Apply the product **AM + PM · DAYS 1–14**

1. Start with **clean skin**. Apply this product **before** any other products (like moisturizers or creams).
2. Take the bottle out of the fridge and **gently rotate** it a few times to mix.
3. Spray the affected area until **fully covered** (usually 3–5 sprays).
4. Let it dry for **at least 60 seconds** before touching the area or applying anything else.
5. Cap the bottle and put it **back in the fridge**.

DAY 15: YOU MADE IT!

Take your final swab in the morning, then fill out the **Post-use survey**. Keep both swab tubes at room temperature. We'll be in touch about mailing them back.
